MISSOURI SCHOOL HEALTH DATA

Chronic Conditions Data from SHORS Reporting 2024-2025

7.6%

Students with Asthma

0.33%

Students with Diabetes (Type 1 or Type 2)

3.3%

Students with Life-Threating Allergies

0.85%

Students with Seizure Disorder

501 of 558 public and charter schools responded to our survey. That is 90% of Missouri schools, with 98% of Missouri students being represented.

School nurses play a vital role in educating students and staff about chronic conditions like **asthma**, **diabetes**, **allergies**, and **seizures**. They provide tailored health plans, teach the use of emergency medications such as inhalers, insulin, Epi pens and seizure rescue treatments, and train staff to recognize and respond to emergencies. Through proactive education, school nurses empower the school community to create a safer, healthier environment for all students.
