

## Saving an ESSENCE Map As a Graphics File

Click on the map details link or use the Missouri ESSENCE Map Portal feature to generate a map. You should see something similar to the map below. To save an image of the map, click the printer icon in the top menu system.

A frame will appear on the bottom of the page (see below.) Click on the box labeled Create Print Page. A new window will open.

In the new window, right click the frame containing the large map, and choose the option Save Picture As from the popup menu. You will now be able to save the map as a bitmap image. If you need the file in a different format, you can open the bitmap image in a program such as Microsoft Paint and Save As a different file type. On Windows systems, you can usually find Paint by going to the Start menu, the Programs folder, and then the Accessories folder.
