## Week 14: March 30 – April 5, 2014

### Summary

#### National:

- According to this week's CDC's FluView report, seasonal influenza activity is low and declining nationally.

#### State:

- Missouri is reporting Sporadic Influenza Activity to CDC, with 22,380 influenza cases reported season-to-date. This represents all laboratory and aggregate influenza reports. Sporadic Activity is defined as: influenza-like illness activity has not increased and there are isolated lab-confirmed cases or a lab-confirmed outbreak in a single institution in the state.
- One specimen was received by the State Public Health Laboratory for viral testing during week 14; it was positive for 2009 H1N1 Influenza. The most common influenza subtype detected by the State Public Health Laboratory has been 2009 H1N1 Influenza this season.
- There have been no reported Influenza-like illness outbreaks reported for Week 14. There has been one Influenza-like illness outbreak reported for the 2013-2014 season. There have been no reported school closures due to Influenza-like Illness for the 2013-2014 season.
- No pediatric influenza-associated deaths were reported in Week 14, no pediatric deaths reported for the 2013-2014 season.
- In Week 14, the percentage of visits for influenza-like-illness (ILI) reported by the Missouri Outpatient ILI Surveillance Network (ILINet) is 1.94%. This is below the national baseline of 2.0% and Missouri's baseline of 2.42%
- In Week 14, the statewide rate of Influenza-like Illness visits per total visits to hospital emergency rooms reported through the ESSENCE syndromic surveillance system was 1.1%. Northwest region reported 1.0%, Central region reported 1.4%, Eastern region reported 0.7%, Southeast region reported 1.2%, and Southwest region reported 1.9%.

# FLUVIEW

A Weekly Influenza Surveillance Report Prepared by the Influenza Division  
Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists\*

Week Ending March 29, 2014- Week 13

\*This map indicates geographic spread and does not measure the severity of influenza activity.

For the week ending **April 5, 2014 (Week 14)**, Missouri reported **Sporadic** Influenza Activity to the CDC. Sporadic is defined as: influenza-like illness activity has not increased and there are isolated lab-confirmed cases or a lab-confirmed outbreak in a single institution in the state.

For the week ending March 29, 2014 (week 13), Flu View reported five states with widespread, four states reported regional influenza activity, 17 states reported local influenza activity, 23 states reported sporadic influenza activity, and one state reported no influenza activity. The influenza activity reported by state and territorial epidemiologists indicates geographic spread of influenza viruses, but does not measure the severity of influenza activity.

## Contact Us

The Missouri Department of Health and Senior Services after hours number for reporting disease cases and emergencies is **1-800-392-0272**.

<sup>1</sup>All data in this report are provisional and may change as reports are updated.

<sup>2</sup>Influenza activity codes are reported to CDC each Tuesday.

**Data Sources:** Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet).
