Table 1. Reported Laboratory cases by sub-type for the Week ending April 16, 2011 (Week 15)

Serogroups	A (non-typed)	A (H1)	A (H1N1)	A (H3)	B	A or B Untyped (rapid test)	Total
Week 15	46	0	1	0	46	1	94

One specimen was received by the State Public Health Laboratory for viral testing during week 15; it was positive for 2009 Influenza A (H1N1).

Table 2. Influenza Season-to-Date and 5-season Median by Influenza Type Through Week Ending April 16, 2011 (Week 15)

Influenza Type	2010-2011 Season	5-Season Median	% Change from 5-Season Median
Influenza A	10,416	9,062	14.9%
Influenza B	6,180	2,179	183.6%
Influenza Unknown Or Untyped	799	2,825	(71.7%)
Total	17,395	14,698	18.3%

Table 3. Influenza Season-to-Date and 5-season Median by Age Group Through Week Ending April 16, 2011 (Week 15)

Age Group	2010-2011 Season	5-Season Median	% Change from 5-Season Median
00-<02	1,552	1,687	(8.0%)
02-04	2,439	2,489	(2.0%)
05-14	5,523	6,418	(13.9%)
15-24	2,619	2,071	26.5%
25-49	3,452	2,154	60.3%
50-64	1,002	920	8.9%
65+	808	348	132.2%
Total	17,395	14,698	18.3%

Table 4. Influenza Season-to-Date and 5-season Median by District Through Week Ending April 16, 2011 (Week 15)

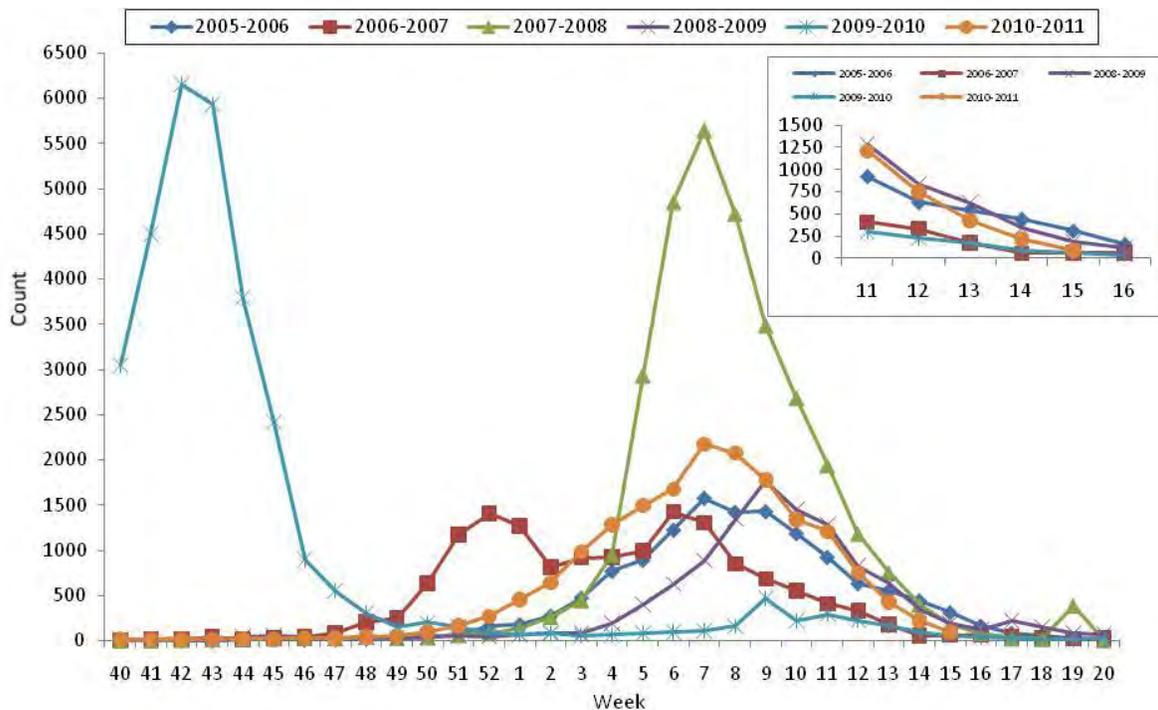

District	2010-2011 Season	5-Season Median	% Change from 5-Season Median
CE	1,763	1,860	(5.2%)
EA	4,791	4,316	11.0%
NW	4,403	3,998	10.1%
SE	2,750	1,786	54.0%
SW	3,688	3,569	3.3%
Total	17,395	14,698	18.3%

Table 5. Deaths involving Pneumonia and Influenza (P&I) Reported During the Week Ending April 9, 2011 (Week 14)

Week 14	Season-to-Date 2010-2011	Season-to-Date 2009-2010	Week 14 Last Season*	5 Year Weekly Median
90	2,531	1,746	63	79

*A new system was implemented February 2010 causing P&I death data to be inconsistent.

Graph 1. Reported Influenza Cases 2010-2011 Season-To-Date as compared to the previous Five Influenza Seasons Through the Week Ending April 16, 2011 (Week 15)

The number of reported influenza cases for week 15 of the 2010-2011 season is following historical trends. The 2007-2008 season has higher case counts due to the mismatch of the vaccine and the circulating influenza strain.

Table 6: Outbreaks/Closures Due to Influenza-like Illness

	Outbreaks		Closures	
	Current Season 2010-2011	Previous Season 2009-2010	Current Season 2010-2011	Previous Season 2009-2010
Week 15	0	0	0	0
Season-to-date (Week 40-Week 15)	5	14	0	58

*Only counties with sentinel provider(s) are listed above.

**To learn about ILINet, view the following website: <http://www.cdc.gov/flu/weekly/fluactivity.htm>

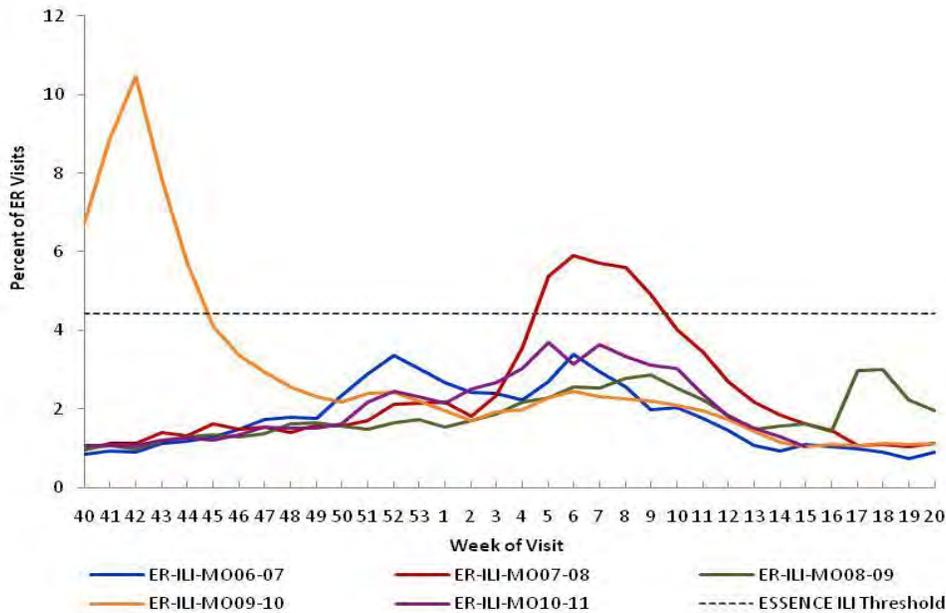

***This is **below** the national baseline of 2.5%.

Graph 2. Percentage of Visits for Influenza-like-Illness (ILI) Reported by the Missouri Outpatient ILI Surveillance Network (ILINet) 2010-2011 Season-To-Date as compared to the previous Two Influenza Seasons Through the Week Ending April 16, 2011 (Week 15)

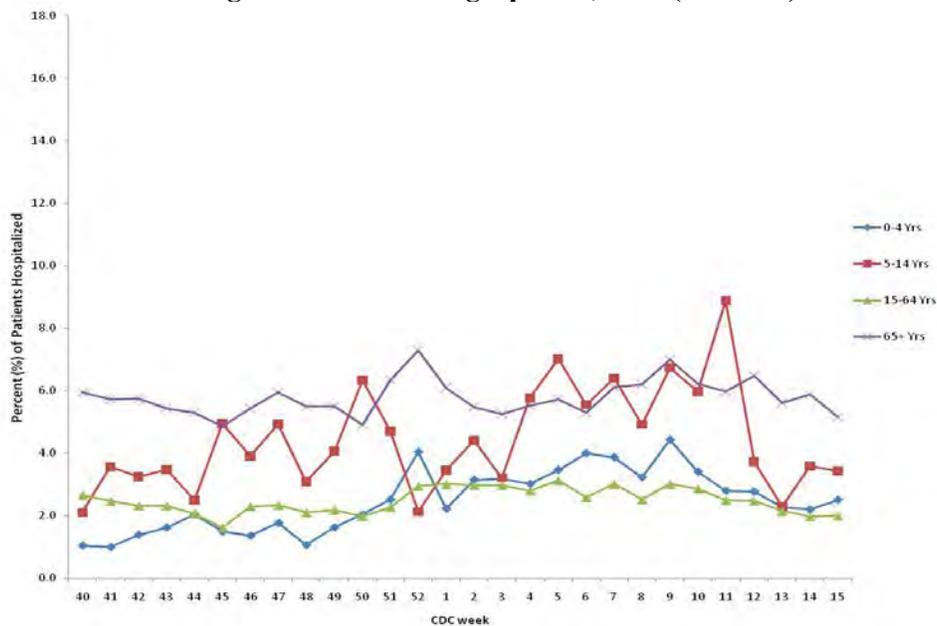

The proportion of patient visits for influenza-like illness has increased from 1.59% for week 14 to 2.07% for the week ending April 16, 2011 (week 15), as reported by ILINet in Missouri. This is below Missouri’s baseline of 2.47%.

Graph 3. Weekly Percentage of Influenza-like Illness Chief Complaints in ESSENCE Participating Hospitals 2006-2011 Influenza Seasons Through the Week Ending April 16, 2011 (Week 15)

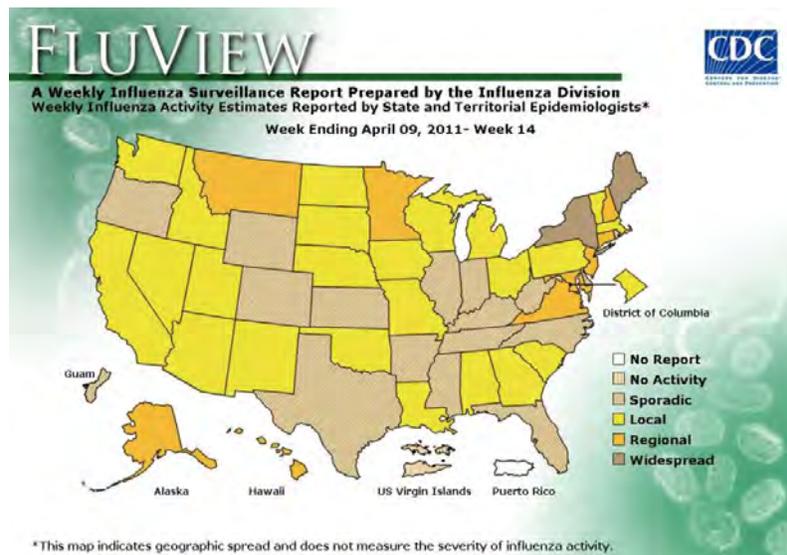

*ESSENCE ILI Threshold refers to the mean plus 2 standard deviations of the values during previous influenza seasons (week 40-20, 2006-2007) when influenza activity was low.

Graph 4. Percentage of Patients Hospitalized for Influenza and/or Pneumonia Syndromes By Age Group from 81 Participating Missouri Hospitals Through the Week Ending April 16, 2011 (Week 15)

The 0-4 age group has increased to 2.51% in Week 15. The 15-64 age group has also increased to 2.00% in Week 15. All other age groups have decreased in Week 15.

For the week ending April 16, 2011 (Week 15), Missouri reported **Local** activity to the CDC. Local activity is defined as increased ILI in one region; ILI activity in regions is not increased and recent (within the past three weeks) lab evidence of influenza in region with increased ILI. Or two or more institutional outbreaks (ILI or lab confirmed) in one region; ILI activity in other regions is not increased and recent (within the past three weeks) lab evidence of influenza in region with outbreaks; virus activity is no greater than sporadic in other regions.

For the week ending April 9, 2011 (Week 14), Flu View reported two states with widespread influenza activity; nine states reported regional influenza activity; twenty three states reported local influenza activity; and sixteen states reported sporadic influenza activity. The influenza activity reported by state and territorial epidemiologists indicates geographic spread of influenza viruses, but does not measure the severity of influenza activity.

Contact Us

The Missouri Department of Health and Senior Services after hours number for reporting disease cases and emergencies is **1-800-392-0272**.

¹*All data in this report are provisional and may change as reports are updated.*

²*Influenza activity codes are reported to CDC each Tuesday.*

Data Sources: Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet).
