\*\*\*This is **below** the national baseline of 2.0%.

**Graph 2. Percentage of Visits for Influenza-like-Illness (ILI) Reported by the Missouri Outpatient ILI Surveillance Network (ILINet) 2013-2014 Season-To-Date as compared to the previous Two Influenza Seasons Through the Week Ending November 16, 2013 (Week 46)**

ILINet baseline refers to the mean of the values during previous three influenza seasons (week 40-20, 2010-11, 2011-12 and 2012-13) with low influenza activity.

The proportion of patient visits for influenza-like illness is 1.70% for week ending November 16, 2013 (Week 46). This is below Missouri’s baseline of 2.42%.

**Graph 3. Weekly Percentage of Influenza-like Illness Chief Complaints in ESSENCE Participating Hospitals 2007-2014 Influenza Seasons Through the Week Ending November 16, 2013 (Week 46)**

\*ESSENCE ILI Threshold refers to the mean plus 3 standard deviations of the values during previous influenza seasons (weeks 40-20, 2006-07, 2008-09 and 2010-2011) when influenza activity was low.

\*This map indicates geographic spread and does not measure the severity of influenza activity.

For the week ending **November 16, 2013 (Week 46)**, Missouri reported **No activity** to the CDC. No activity is defined as influenza-like illness activity is low and there are no lab confirmed cases.

For the week ending November 9, 2013 (week 45), Flu View reported no state with widespread. One state reported regional influenza activity. Eight states reported local influenza activity, 35 states reported sporadic influenza activity and 6 states reported no activity. The influenza activity reported by state and territorial epidemiologists indicates geographic spread of influenza viruses, but does not measure the severity of influenza activity.

<sup>1</sup>*All data in this report are provisional and may change as reports are updated.*

<sup>2</sup>*Influenza activity codes are reported to CDC each Tuesday.*

**Data Sources:** Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet).
