

Vaccinate Your Pets

Rabies can be this close.

Protect Your Pets and Those You Love

1

Your pets and other domestic animals can be infected when they are bitten by rabid wild animals.

2

Visit your veterinarian with your pet on a regular basis and keep rabies vaccinations up-to-date for all cats, dogs and ferrets.

3

Maintain control of your pets by keeping cats and ferrets indoors and keeping dogs under direct supervision.

4

Spay or neuter your pets to help reduce the number of unwanted pets that may not be properly cared for or vaccinated regularly.

5

Call animal control to remove stray animals from your neighborhood since these animals may be unvaccinated or ill.

6

There is no postexposure treatment available for animals as there is for humans.

*You are at risk for rabies
because of your close contact
with your pet.*
