

Check, Check, Check

Do you spend time in places where ticks hide, like tall grass, brush or the woods?

A bite from an infected tick can make you seriously ill.

Here is a checklist of things you can do to protect yourself from tick-borne diseases:

for Ticks

- ✓ Wear long sleeves and long pants in solid, light colors to spot ticks easily

- ✓ Tuck pants into socks or boots to keep ticks out

- ✓ Check for repellents labeled to repel or kill ticks

- ✓ Use fingertips to feel for tiny bumps on scalp and skin, and look for any new "freckles" or spots

- ✓ Ticks can infect in four hours or less - remove ticks promptly

- ✓ Check pets completely for ticks before they come indoors
