### Description:

To assist state, local, tribal, territorial, and federal public health practitioners in monitoring emergency department visits for suspected cocaine overdose using syndromic surveillance data. The CDC Cocaine Overdose v2 Parsed definition was designed to be used to identify ED visits for suspected nonfatal cocaine-involved overdoses of unintentional or undetermined intent. The query relies on data in two fields from ED visit records to identify encounters that meet the definition criteria. Within ESSENCE, the syndrome query is applied to the Chief Complaint Discharge Diagnosis (CCDD) Parsed field, which combines these two fields of interest.

The factsheet is available here:
