This figure provides estimates of engagement in HIV care among persons diagnosed and living with HIV whose most recent diagnosis of HIV or stage 3 (AIDS) occurred in Missouri. Data presented may change if methods to generate the estimates are altered. Data columns for diagnosed, linked to care, retained in care, and virally suppressed are calculated independently, and therefore should not be interpreted as related measures. Extreme caution should be used when comparing with data from other jurisdictions as the populations included and methods used to calculate the various measures may vary significantly.

**Engagement in HIV Care, Northwest HIV Care Region⁵, 2014**

### Total and By Sex
140 persons living with HIV disease, Northwest HIV Care Region, 2014*:
- 26 females
- 114 males

### By Selected Age Group
Living with HIV disease, Northwest HIV Care Region, 2014*:
- 4 persons 13-24 years old
- 52 persons 25-44 years old
- 84 persons 45+ years old

### By Selected Race/Ethnicity
Living with HIV disease, Northwest HIV Care Region, 2014*:
- 101 whites
- 4 Hispanics
- 34 blacks/African Americans (AA)

### By Selected Age Group
Living with HIV disease, Northwest HIV Care Region, 2014*:
- 26 females
- 114 males

### By Selected Transmission Category
Living with HIV disease, Northwest HIV Care Region, 2014*:
- 22 heterosexual contact (HRH)
- 16 injection drug use (IDU)
- 71 men who have sex with men (MSM)
