### Fatal Opioid Overdose Characteristics and Risk Factors

January 2014- December 2018

- **Race:**
  - White: 100%
  - High School Equivalency or Greater: 66%

- **Sex:**
  - Female: 58%

- **Age:**
  - 25-34: 33%

- **Occupation:**
  - Physical Labor: 25%

In Crawford County, the majority of those who fatally overdose are White. Nearly 1 in 3 victims were between the ages of 25 and 34. Females are slightly more likely than males to experience a fatal overdose, which is the opposite of what is seen in many Missouri counties and a different trend than what is seen in nonfatal overdoses in Crawford County.

This data sheet provides the most timely data available for each topic, meaning data is subject to change and time periods for different variables may not align. This data uses ESOOS specific definitions for opioid overdose, which may result in frequencies that do not match other data sources.

Please contact the Missouri Department of Health and Senior Services, Bureau of Health Care Analysis and Data Dissemination at 573-751-6285 for more information or to request a fact sheet for your community.
