The Enhanced State Opioid Overdose Surveillance (ESOOS) grant was awarded to the Missouri Department of Health and Senior Services (MODHSS) to accomplish key goals:

--enhance the comprehensiveness and timeliness of both fatal and nonfatal opioid overdoses and;
--disseminate surveillance findings to stakeholders.

In Franklin County, most who fatally overdose have some history of substance abuse (96%) and almost one-fifth have overdosed previously. Fatal overdoses rarely happen alone with no bystander present (71%), and EMS is often present post-event (78%). Many overdoses indicate polysubstance use, specifically including use of benzodiazepines (29%). Unfortunately, substance abuse treatment is indicated in less than 10% of those who fatally overdose in Franklin County.

This data sheet provides the most timely data available for each topic, meaning data is subject to change and time periods for different variables may not align. This data uses ESOOS specific definitions for opioid overdose, which may result in frequencies that do not match other data sources.

Please contact the Missouri Department of Health and Senior Services, Bureau of Health Care Analysis and Data Dissemination at 573-751-6285 for more information or to request a fact sheet for your community.
