The Enhanced State Opioid Overdose Surveillance (ESOOS) grant was awarded to the Missouri Department of Health and Senior Services (MODHSS) to accomplish key goals:

--enhance the comprehensiveness and timeliness of both fatal and nonfatal opioid overdoses and ;

--disseminate surveillance findings to stakeholders.

This data sheet provides the most timely data available for each topic, meaning data is subject to change and time periods for different variables may not align. This data uses ESOOS specific definitions for opioid overdose, which may result in frequencies that do not match other data sources.

Please contact the Missouri Department of Health and Senior Services, Bureau of Health Care Analysis and Data Dissemination at 573-751-6285 for more information or to request a fact sheet for your community.

### Fatal Opioid Overdose Characteristics and Risk Factors

January 2017- December 2017

In St Louis City, many who fatally overdose have some history of substance abuse (76%) and more than 1 in 10 have overdosed previously. Fatal overdoses often happen alone with no bystander present (41%), though EMS is nearly always present post-event (91%). A number of overdoses indicate polysubstance abuse, including use of benzodiazepines (24%). Unfortunately, substance abuse treatment is indicated in less than 15% of those who fatally overdose. One-third of fatal overdoses in St Louis City are attributed to non-City residents.

### Fatal Overdose Location

January 2017- December 2017

- House, apartment (67.23%)
- Outside (10.92%)
- Building/Place other than home (8.82%)
- Vehicle (6.30%)
- Hotel/motel (2.94%)
- Hospital or Medical Facility (0.84%)
- Unknown (2.94%)

### Nonfatal Opioid Overdose Health Care Utilization

January 2017- June 2018

Above: Over 66% of nonfatal opioid overdose discharges seen in the ER involved heroin. In St Louis City, most of the people discharged from the ER with nonfatal overdoses were male (70%) and between the ages of 25-34.

Below: When fatal overdoses occur in St Louis City, they most often occur in a house or apartment (67%) and emergency medical services are frequently present (91%).

### MORTALITY

245 FATAL opioid overdoses in 2017

6.5% DECREASE (from 2016)
