Nonfatal Opioid Overdose Health Care Utilization  
January 2017- June 2018

Above: More than half (58%) of resident nonfatal opioid overdose discharges treated in the hospital or ED involved non-heroin opioids. In Ste. Genevieve County, most of the people discharged from the ER with nonfatal overdoses were male (67%) and all were between the ages of 15-34.

Below: When fatal overdoses occur in Ste. Genevieve County, they most often occur in a house or apartment (94%).

The Enhanced State Opioid Overdose Surveillance (ESOOS) grant was awarded to the Missouri Department of Health and Senior Services (MODHSS) to accomplish key goals:

--enhance the comprehensiveness and timeliness of both fatal and nonfatal opioid overdoses and

--disseminate surveillance findings to stakeholders.

If you or a loved one has a problem with alcohol or drugs, please call: (800) 575-7480

FATAL opioid overdoses in 2018

50% INCREASE (from 2017)

In Ste. Genevieve County, the majority of those who fatally overdose are White males. Roughly 1 in 4 of these victims was under the age of 35 and many were workforce members with a physical labor-involved occupation. Less than 1 in 5 overdose victims did not complete a high school level education.

This data sheet provides the most timely data available for each topic, meaning data is subject to change and time periods for different variables may not align. This data uses ESOOS specific definitions for opioid overdose, which may result in frequencies that do not match other data sources.

Please contact the Missouri Department of Health and Senior Services, Bureau of Health Care Analysis and Data Dissemination at 573-751-6285 for more information or to request a fact sheet for your community.
