# Flu Shots: Get the Facts

## When should I get my flu shot?

It takes two weeks after vaccination for antibodies to properly develop in your body, so getting your flu shot in early fall is recommended, but flu shots are available through January and later.

## Who should get a flu shot in my family?

Anyone over 6 months old can and should get a flu shot annually.

## Where can I get a flu shot?

Visit [VaccineFinder.org](https://www.vaccinefinder.org) to find your nearest location or check with your health care provider.

Getting vaccinated doesn't just protect you. From babies and young children to older adults and people with chronic health conditions, getting the flu vaccine every year protects the most vulnerable around you from contracting serious flu illnesses.
