Missouri Weekly Influenza Surveillance Report
2017-2018 Influenza Season

Week 13: March 25 – 31, 2018

All data are preliminary and may change as more reports are received.

Summary:

- The estimated influenza activity in Missouri is Regional.

- During Week 13, a total of 752 laboratory-positive influenza cases (254 influenza A, 486 influenza B, and 12 untyped) were reported. A season-to-date total of 131,417 laboratory-positive influenza cases (84,505 influenza A, 45,032 influenza B, and 1,880 untyped) have been reported in Missouri as of Week 13. The influenza type for reported season-to-date cases includes 65% influenza A, 34% influenza B, and 1% untyped. Thirteen laboratory-positive cases of influenza (four influenza A (H3), six influenza A (H1N1), one influenza B (Yamagata), and two influenza B (Victoria)) were reported by the Missouri State Public Health Laboratory (MSPHL) during Week 13.

- Influenza-like illness (ILI) activity was below baseline for both the Missouri Outpatient ILI Surveillance Network (ILINet) and the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI was 1.34% (Figure 5) and 1.76% (Figure 7) through ILINet and ESSENCE respectively. The ILI data from a small number of sites located in the Northwest Region of the state is temporarily unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) decreased during Week 13 (Figure 6).

- Two hundred and sixty influenza-associated deaths have been reported in Missouri as of Week 13. During Week 12, 59 deaths involving Pneumonia and Influenza (P&I) were reported to the Bureau of Vital Records, resulting in a season-to-date total of 1,677 P&I associated deaths in Missouri.

- Sixty-seven outbreaks of influenza or ILI have been reported and 15 influenza or ILI-associated school closures have been reported in Missouri as of Week 13.

- Influenza activity decreased in the U.S. during Week 12. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at [http://www.cdc.gov/flu/weekly/fluactivitysurv.htm](http://www.cdc.gov/flu/weekly/fluactivitysurv.htm).

---

1The 2017-2018 influenza season begins CDC Week 40 (week ending October 7, 2017) and ends CDC Week 39 (week ending September 29, 2018).

2Regional is defined as: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.

3Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

4Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

5All influenza-associated deaths became reportable in Missouri in 2016.

6The P&I data are available one week later. The P&I data for the CDC Week provided is the most current data available.

Figure 4. Number of Laboratory-positive† Influenza Cases by CDC Week, Missouri, 2014-2018*

†Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

‡2017-2018 season-to-date through the week ending May 19, 2018 (Week 20). The 2014-2015 season had 53 weeks rather than the usual 52. Week 53, 2014-2015 flu season has 3,082 reported confirmed cases. Data Source: Missouri Health Information Surveillance System (WebSurv).
Figure 5. Percentage of Outpatient Visits for Influenza-like Illness (ILI), Missouri Outpatient ILI Surveillance Network (ILINet) 2014-2018†

*The ILINet Region 7 (MO, IA, KS, NE) baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons, plus two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season’s total number of specimens that tested positive for influenza.

Data Source: U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Centers for Disease Control and Prevention (CDC).

†2017-2018 season-to-date through the week ending May 19, 2018 (Week 20). The 2014-2015 season had 53 weeks rather than the usual 52. The percentage of outpatient visits for ILI during Week 53 was 7.63.

Data Source: National Respiratory and Enteric Virus Surveillance System (NREVSS), Centers for Disease Control and Prevention (CDC).

2016-2017 season-to-date through the week ending May 19, 2018 (Week 20).
Figure 7. Percentage of Emergency Department (ED) Visits for Influenza-like Illness (ILI) in ESSENCE Participating Hospitals, 2014-2018 Influenza Seasons*†‡

*The ESSENCE ILI Baseline is the mean percent of ILI visits for each week during the previous three years (2014-16) when percentage of ILI visits were less than 2% of total visits, plus two standard deviations.

†Data Source: Missouri Department of Health and Senior Services (DHSS), Bureau of Reportable Disease Informatics, ESSENCE version 1.20.

‡The 2014-2015 season had 53 weeks rather than the usual 52. The percentage of visits for ILI in ESSENCE participating hospitals during Week 53 was 4.38%.

‡The ILI data from a small number of sites located in the Northwest Region of the state is temporarily unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution.
