Missouri Weekly Influenza Surveillance Report
2016-2017 Influenza Season

Week 18: April 30 – May 6, 2017

All data are preliminary and may change as more reports are received.

Summary:

- The estimated influenza activity in Missouri decreased to Sporadic.

- A season-to-date total of 71,293 laboratory-positive influenza cases (45,689 influenza A, 24,342 influenza B, and 1,262 untyped) have been reported in Missouri as of Week 18. The influenza type for reported cases season-to-date includes 64% influenza A, 34% influenza B, and 2% untyped. The highest season-to-date rates of reported laboratory-positive influenza cases are among children aged 0-4 years (2,781 cases per 100,000 population) and 5-14 years (2,514 cases per 100,000). One laboratory-confirmed case of influenza A (H3N2) was reported by the Missouri State Public Health Laboratory (MSPHL) during Week 18.

- The Centers for Disease Control and Prevention (CDC) has antigenically characterized 19 influenza isolates from Missouri, to date, this influenza season. Eleven viruses were antigenically similar to the A/Hong Kong/4801/2014-like (H3N2) virus, four viruses were antigenically similar to the B/Brisbane/60/2008-like virus, three viruses were antigenically similar to the B/Phuket/3073/2013-like virus, and one virus was antigenically similar to the A/California/07/2009-like (H1N1)pdm09 virus. An A/Hong Kong/4801/2014-like (H3N2) virus, a B/Brisbane/60/2008-like virus, and an A/California/07/2009-like (H1N1)pdm09 virus are included in the 2016-2017 Northern Hemisphere trivalent and quadrivalent vaccine formulations. A B/Phuket/3073/2013-like virus is included in the 2016-2017 Northern Hemisphere quadrivalent vaccine formulation.

- Influenza-like illness (ILI) activity is below baseline for both the Missouri Outpatient ILI Surveillance Network (ILINet) and the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI was 1.44% and 1.19% through ILINet and ESSENCE respectively. The percentage of respiratory specimens testing positive for influenza in clinical laboratories decreased during Week 18.

- Ninety-eight influenza-associated deaths have been reported in Missouri as of Week 18. During Week 17, 40 deaths involving Pneumonia and Influenza (P&I) were reported to the Bureau of Vital Records, resulting in a season-to-date total of 2,034 P&I associated deaths in Missouri.

- Forty-six influenza or ILI-associated outbreaks have been reported in Missouri as of Week 18. Eleven influenza or ILI-associated school closures have been reported in Missouri as of Week 18.

- Influenza activity decreased in the U.S. during Week 17. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at http://www.cdc.gov/flu/weekly/fluactivitysurv.htm.

---

1The 2016-2017 influenza season begins CDC Week 40 (week ending October 8, 2016) and ends CDC Week 39 (week ending September 30, 2017).

2Sporadic is defined as: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of IILI.

3Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

4Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. Influenza-like illness (ILI) is defined by ESSENCE as Emergency Department chief complaints that contain keywords such as “flu”, “flu-like”, “influenza” or “fever” plus “cough” or “fever” plus “sore throat”.

5The P&I data are available one week later. The P&I data for the CDC Week provided is the most current data available.

### Figure 4. Number of Laboratory-positive† Influenza Cases by CDC Week, Missouri, 2013-2017*

†Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

Figure 5. Percentage of Outpatient Visits for Influenza-like Illness (ILI), Missouri Outpatient ILI Surveillance Network (ILINet) 2013-2017

*The ILINet Region 7 (MO, IA, KS, NE) baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons, plus two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season’s total number of specimens that tested positive for influenza.

Data Source: U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Centers for Disease Control and Prevention (CDC).

†2016-2017 season-to-date through the week ending May 20, 2017 (Week 20). The 2014-2015 season had 53 weeks rather than the usual 52. The percentage of outpatient visits for ILI during Week 53 was 7.63.

Figure 6. Season-to-Date PCR (+) Tests for Influenza in Missouri

Data Source: National Respiratory and Enteric Virus Surveillance System (NREVSS), Centers for Disease Control and Prevention (CDC).

2016-2017 season-to-date through the week ending May 20, 2017 (Week 20).
Figure 7. Weekly Percentage of Influenza-like Illness (ILI) in ESSENCE Participating Hospitals, for 2013-2017 Influenza Seasons*†

*The ESSENCE ILI Baseline is the mean percent of ILI visits for each week during the previous three years (2013-15) when percentage of ILI visits were less than 2% of total visits, plus two standard deviations.

†The 2014-2015 season had 53 weeks rather than the usual 52. The percentage of visits for ILI in ESSENCE participating hospitals during Week 53 was 4.3.

Figure 8. Percentage of Visits for Influenza-like Illness (ILI) in ESSENCE Participating Hospitals, by Age-group, District and Statewide, CDC Week 18, 2017

Data Source: Missouri Department of Health and Senior Services (DHSS), Bureau of Reportable Disease Informatics, ESSENCE.
Figure 9. Percentage of Visits for Influenza-like Illness (ILI) in ESSENCE Participating Hospitals, by District and Statewide, for the 2016-2017 Influenza Season*†

Data Source: Missouri Department of Health and Senior Services (DHSS), Bureau of Reportable Disease Informatics, ESSENCE.

*Changes in ILI surveillance for the Northwest District were implemented on January 16, 2017.
†Not all data was available for the Northwest District during Week 6.
