Missouri Weekly Influenza Surveillance Report  
2019-2020 Influenza Season

Week 48: November 24, 2019 – November 30, 2019

All data are preliminary and may change as more reports are received.

Summary:

- The estimated influenza activity in Missouri is Local.

- A total of 264 laboratory-positive influenza cases (104 influenza A, 159 influenza B, and 1 untyped) were reported during Week 48. The season-to-date total of laboratory-positive influenza cases is 1,548 (49.3% influenza A, 50.1% influenza B, and 0.6% untyped). No laboratory-positive cases of influenza were reported by the Missouri State Public Health Laboratory (MSPHL) during Week 48. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) continued to increase during Week 48 (Figure 6).

- Influenza-like illness (ILI) activity was above baseline for the Missouri Outpatient ILI Surveillance Network (ILINet) and for the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI was 4.31% (Figure 5) and 2.67% (Figure 7) through ILINet and ESSENCE respectively. The ILI data from a small number of sites located in the Northwest Region of the state is currently unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution.

- Three influenza-associated deaths have been reported in Missouri as of Week 48. During Week 47, 50 deaths involving Pneumonia and Influenza (P&I) were reported to the Bureau of Vital Records, resulting in a season-to-date total of 317 P&I associated deaths in Missouri.

- No influenza or ILI-associated outbreaks or school closures have been reported in Missouri as of Week 48.

- Seasonal influenza activity in the United States continued to increase during Week 47. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at [http://www.cdc.gov/flu/weekly/fluactivitysurv.htm](http://www.cdc.gov/flu/weekly/fluactivitysurv.htm).

---

1 The 2019-2020 influenza season begins CDC Week 40 (week ending October 5, 2019) and ends CDC Week 39 (week ending September 26, 2020).

2 Local is defined as: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.

3 Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

4 Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIfevers).

5 All influenza-associated deaths became reportable in Missouri in 2016.

6 The P&I data are available one week later. The P&I data for the CDC Week provided is the most current data available.

†Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*2019-2020 season-to-date through the week ending May 16, 2020 (Week 20). Data Source: Missouri Health Information Surveillance System (WebSurv).
The ILINet Region 7 (MO, IA, KS, NE) baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons, plus two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season’s total number of specimens that tested positive for influenza. Data Source: U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Centers for Disease Control and Prevention (CDC).

†2019-2020 season-to-date through the week ending May 16, 2020 (Week 20).
