

Roundtable Discussion: Electronic Medical Records (EMR)

1. Is your clinic moving from mostly paper medical records to mostly electronic medical records?
2. Is your clinic migrating from one EMR system to another?
3. What EMR do you use?
4. If you have an EMR describe how it has helped your clinic with immunization practices?
5. Does your EMR have a built-in immunization schedule?
6. Does your EMR have a vaccine inventory system?
7. Does your EMR allow you to generate immunization reports such as a patient reminder recall list or a clinic/provider immunization rate?
8. Does your EMR use 2-D barcoding (QR codes) to scan vaccine product information from packing?
9. Does your EMR interface with electronic temperature monitoring devices?
10. Does your EMR send records to ShowMeVax? Do you verify doses make it into ShowMeVax?
11. Can your EMR look-up records within ShowMeVax?
12. ShowMeVax will be going through an upgrade over the next year to allow new EMRs to look-up records and return vaccine forecasts.
13. Can your EMR look-up records from other states, providers or clinics?
14. Does your EMR vendor understand there are different manufacturers and tradenames for the same vaccines?
