USDA Feeding Infants Using Ounce Equivalents for Grains in the CACFP worksheet			

- ¹ Breastmilk or iron-fortified infant formula, or portions of both, must be served; however, it is recommended that breastmilk be served in place of formula from birth through 11 months. For some breastfed infants who regularly consume less than the minimum amount of breastmilk per feeding, a serving of less than the minimum amount of breastmilk may be offered, with additional breastmilk offered later if the infant will consume more.
- ² Infant formula and dry infant cereal must be iron-fortified.
- ³ Breakfast cereals must contain no more than 6 grams of sugar per dry ounce. Ready-to-eat cereal may be served as part of a reimbursable snack.
- ⁴ Cooked beans, peas, and lentils may credit as either a vegetable or as a meat alternate, but not as both in the same meal. Immature beans and peas, such as green beans, wax beans, and green peas credit as vegetable only; they do not credit as a meat alternate.
- ⁵ Yogurt must contain no more than 23 grams of total sugars per 6 ounces.
- ⁶ A serving of this component is required when the infant is developmentally ready to accept it.
- ⁷ Fruit and vegetable juices must not be served.
- ⁸ A serving of grains must be whole grain-rich, enriched meal, or enriched flour. Iron-fortified infant cereal is the only grain that may count toward a reimbursable breakfast, lunch, or supper. Ready-to-eat cereals, bread/bread-like items, and crackers may be served as part of a reimbursable snack.
