

## Seed-to-Sale Facility Application License Certification Status (Updated 2/12/2020)

A seed-to-sale tracking system is a software system designed to perform functions necessary to fulfill a licensed or certified facility’s responsibilities in tracking medical marijuana from either the seed or immature plant until the medical marijuana is sold to a qualifying patient or patient’s caregiver. Licensed or certified facilities are required to use the inventory tracking method implemented by the Department, currently known as METRC, as the primary inventory tracking system of record. Licensed or certified facilities are permitted to use a certified Seed-to-sale provider’s secondary software system (“System”) as a Point of Sale or tracking system in conjunction with METRC for the purpose of reporting in real time. All approved Seed-to-sale providers identified below must return a signed Approved Programming Interface (API) User Agreement to the Department and complete Metrc’s system testing and verification process before an API Key for access is issued. The Department may at its discretion instruct Metrc to revoke access of any Seed-to-sale provider who is in violation of the agreement or rules established in 19 CSR 30-95.

Licensed Facilities are strongly advised to contact Metrc or visit their website <https://www.metrc.com/missouri> to obtain a list of current Seed-to-sale or tracking system Integrator providers that have passed the training certification and received integration access (API Key) before selecting a system provider. Facilities are responsible for accurate data reporting to the State’s METRC track and trace system. Facilities will also be scheduled and receive training from METRC on behalf of the Department on using the METRC system shortly before Commencement Inspection. Training with Licensees will be required and ongoing throughout the life of certification and licensure.

This website will be updated upon a change in status of any Seed-to-Sale Certified entity.

The application period will remain open to prospective applicants interested in applying for a Seed-to-sale certification.

The list of Certified Entities below indicate that these integrators are eligible for testing and verification through the state’s track and trace system (Metrc). Go to the Missouri Metrc website to determine final eligibility for a licensed or certified facility to integrate with one of the below systems. MO Metrc website: <https://www.metrc.com/missouri>

Applicant Entity	License/Certification Status	API User Agreement Status*
SWIN LLC	Approved	Pending Return
