Missouri State Standing Order for Naloxone

Updated: June 3, 2026

Section 195.206. RSMo, sanctions the Director of the Department of Health and Senior Services (DHSS) to authorize a Missouri licensed physician to issue a statewide standing order for an opioid antagonist. Pursuant to said section, I hereby authorize Heidi B. Miller, MD to issue such standing order.

This order and procedure shall remain in effect until June 2, 2027, or until DHSS issues an updated standing order. Always refer to the DHSS Missouri State Standing Order for Naloxone webpage (<https://health.mo.gov/sites/health/files/media/pdf/2026/07/naloxone%202026-new%20site.pdf>) and **refresh this webpage** for the most up-to-date version.

This replaces all previous Missouri State Standing Orders for Naloxone, including the last one issued 6/3/2025.

Sarah Willson, MBA, BSN, RN, FACHE
Director
Department of Health and Senior Services

June 3, 2026
Date

Pharmacists in Missouri are encouraged to use this standing order to broaden access to naloxone, a live-saving intervention for reversing opioid overdose. Although naloxone is available over the counter without a prescription, this order can be leveraged:

- (1) To encourage co-dispensing with opioid prescriptions and/or high-risk medical therapy
- (2) To utilize Medicaid, other insurance coverage, or other pharmacy discount to dispense this at zero or minimal cost
- (3) To provide immediate access to individuals without the delay of requesting a prescription

Naloxone HCL Dispensing Protocol	
Eligible Candidates	- Persons who voluntarily request naloxone and/or whom the pharmacist deems at risk of experiencing an opioid-related drug overdose. (Examples of risk factors are included in Appendix A.) - Persons who voluntarily request naloxone and are a family member, friend, or other community member in the position to assist a person at risk of experiencing opioid or other drug overdose. - Individuals, including those under the age of 18, who voluntarily request naloxone and whom the pharmacist believes have reasonably foreseeable circumstances in which they will be positioned to save a life by administering naloxone.

Route(s) of Administration	Intranasal (IN) <i>Preferred method</i>	Intramuscular/Subcutaneous (IM/SC) Injection	
Medication and Required Device(s) for Administration	Naloxone 4mg/per actuation Nasal Spray - Each box contains 2 nasal sprays - Dispense 1 or 2 boxes (as requested by individual recipient or as deemed appropriate by the pharmacist)	Naloxone HCl Injection Vial (0.4 mg/mL) - Dispense: • 2 (two) 1mL single dose vials • 2 (two) 3 mL syringes • 2 (two) 25G, 1-inch needles - Double the quantities listed above may be dispensed, as requested by individual recipient or as deemed appropriate by the pharmacist	Naloxone HCl Injection Prefilled Syringe - Dispense 2 (two) prefilled syringes of one of the following strengths: ▪ 0.4 mg/mL (1 syringe = 1mL) ▪ 2 mg/2 mL (1 syringe = 2mL) - Dispense 2 (two) 25G 1-inch needles - Double the quantities listed above may be dispensed, as requested by individual recipient or as deemed appropriate by the pharmacist
Directions for Use	Call 911. Use one full spray in one nostril one time. Repeat every 2-3 minutes in alternating nostrils as needed if no or minimal response.	Call 911. Inject the entire contents of the vial IM/SC in shoulder or thigh. Repeat every 2-3 minutes as needed if no or minimal response.	Call 911. Inject the entire contents of the syringe IM/SC in shoulder or thigh. Repeat every 2-3 minutes as needed if no or minimal response.
Refills	52		
Pharmacy Instructions to Process Refills	If a prescription has no refills remaining or is expired, <u>there is no need to send a refill request</u> . Use the current standing order to generate a new prescription. If feasible with the pharmacy processing software: - Take precautions to ensure that refills are automatically processed through this state standing order and <i>not</i> erroneously routed to Dr. Heidi B. Miller's own clinical practice location, which would lead to delays and patient privacy violations. Consider the following: a. Generate a separate prescriber profile for "Heidi Miller, MD – MO Standing Order - Chief Medical Officer of DHSS" or other similar description, and/or b. Add language to the prescription label or prescription record with one of the following alerts or similar communication: i. Dispensed pursuant to a MO state standing order, or ii. Refer to pharmacist for refills via MO standing order, or iii. Refer questions about refills to your pharmacist.		
Contraindications	A history of hypersensitivity to naloxone or any of the other ingredients		
Cost	If any patient is unable to receive this naloxone prescription due to cost despite attempts to utilize insurance coverage or prescription coupons, then refer patient to this website to find free naloxone within their community: GetMissouriNaloxone.com		

Patient Education	1. Each person dispensed naloxone under this standing order shall be offered education regarding the risk factors of overdose, signs of an overdose, overdose response steps, proper use of naloxone, and need for the comprehensive substance use medical treatment. - In addition to administering naloxone for opioid overdose, rescue breathing is recommended according to the 2025 AHA training in Basic Life Support (BLS) (see Appendix A for more information). 2. Offer recipient a list of local treatment resources for substance use disorder. Locations are available on the NoMoDeaths treatment website (https://nomodeaths.org/index.php/get-treatment/). (see Appendix B)

June 3, 2026

This signed order is effective on June 3, 2026
 and expires on June 2, 2027, at 11:59pm.

Appendix A: Additional Information for Pharmacist

Risk Factors for which Naloxone Dispensing may be Indicated:

Examples include but are not limited to the following:

- Persons with current or history of use of non-prescribed medication (e.g., opioids, amphetamines, benzodiazepines, etc.), unregulated substances (e.g., 7-hydroxy), and other illicit substances (e.g., methamphetamines, cocaine, etc.)
- Persons with a history of opioid or other drug intoxication or overdose
- Persons with an opioid prescription of any dose and quantity
- Persons with an opioid prescription with one or more of the following:
 - A high dose opioid prescription (>50 morphine mg equivalents per day)
 - A co-prescription of benzodiazepines or other sedatives
 - Suspected concurrent alcohol or other substance use
 - Smoking, COPD, or other respiratory illness
 - Kidney dysfunction, liver disease, heart disease, or HIV/AIDS
- Persons who have recently detoxified or have been abstinent from opioids
- Persons entering, participating in, or exiting treatment programs for substance use or pain disorder
- Persons who may have difficulty accessing emergency medical services
- Persons enrolled in prescription lock-in programs (which stipulate restrictions to a specific provider and/or specific pharmacy location)
- Persons reentering the community after incarceration
- Persons with severe mental illness and/or a history of intentional self-harm/suicide attempts involving substances, where the risk of intentional or impulsive poisoning is elevated
- Persons at risk for opioid overdose for other reasons

Additional Patient Education Considerations

- Overdose response in the pre-hospital setting should include calling 911 and transport to the hospital for monitoring. Continued monitoring is needed after naloxone has treated the overdose because individuals may develop recurrent overdose symptoms once the effects of the last dose of naloxone wear off.
- In addition to administering naloxone for opioid overdose, **rescue breathing** is recommended according to the **American Heart Association (AHA) 2025 Basic Life Support (BLS) Recommendations**
 - The 2025 AHA BLS guidelines recommend that trained rescuers respond to opioid overdoses with rescue breathing and lay rescuers respond with CPR with breaths.
 - Hypoventilation, decreased breathing, is the reason that opioid overdoses can result in death.
 - <https://cpr.heart.org/en/resuscitation-science/cpr-and-ecc-guidelines/adult-and-pediatric-special-circumstances-of-resuscitation#21.11:~:text=Recommendations%20for%20Adults%20and%20Children%20With%20Life%2DThreatening%20Opioid%20Overdose>.
 - Individuals interested in training in the new BLS guidelines can be referred to the [AHA's Find a Class](https://cpr.heart.org/en/cpr-courses-and-kits/healthcare-professional/basic-life-support-bls-training) webpage: <https://cpr.heart.org/en/cpr-courses-and-kits/healthcare-professional/basic-life-support-bls-training>
 - If new BLS guidelines are issued by the AHA, use the most recently released guidelines.
- Optional reference videos for recognizing opioid overdoses and administering naloxone can be found on the Time 2 Act Missouri website (<https://time2actmissouri.com/naloxone>)

Missouri Opioid Treatment Agencies – Updated May 2026

Contact the agencies below to learn more about treatment for Opioid Use Disorder (OUD).

If you do not reach someone right away, continue to call other programs in your area.

For a map of all agencies, visit <https://nomodeaths.org/index.php/get-treatment/>.

Buprenorphine, naltrexone, and methadone* are medications to treat OUD. Ask your provider which may be best for you.

[*Methadone is only available at Opioid Treatment Programs (OTP). OTP locations are marked with an asterisk and highlighted in grey below.]
